

**NEC**

MOS INTEGRATED CIRCUIT

 **$\mu$ PD78212, 78213, 78214****8-BIT SINGLE-CHIP MICROCOMPUTER****DESCRIPTION**

The  $\mu$ PD78212, 78213 and 78214 are 78K/II series products. The 78K/II series is an 8-bit single chip microcomputer which can access the memory space of 1M byte with an external expansion.

Functions are described in detail the following User's Manual, which should be read when carrying out design work.

**$\mu$ PD78214 Series User's Manual Hardware Volume : IEM-1236**

**78K/II Series User's Manual Instruction Volume : IEU-1311**

**FEATURES**

- High-speed instruction execution (at 12 MHz operation) : 333 ns ( $\mu$ PD78212 and 78214)  
500 ns ( $\mu$ PD78213)
- On-chip memory ROM : 8K bytes ( $\mu$ PD78212)  
16K bytes ( $\mu$ PD78214)  
RAM : 384 bytes ( $\mu$ PD78212)  
512 bytes ( $\mu$ PD78213, 78214)
- On-chip high-performance interrupt controller
- On-chip A/D converter (8 bits  $\times$  8 channels)
- I/O pin : 54 pins
- Real-time output port (8  $\times$  1 or 4  $\times$  2)
- Serial interface : 2 channels
- Timer/counter (16  $\times$  1 and 8  $\times$  3)

**APPLICATION**

OA equipment such as printer, typewriter, PPC, FAX, etc., electronic instrument, inverter, camera

# ORDERING INFORMATION

Ordering Code	Package	Quality Grade
μPD78212CW-xxx	64-pin plastic shrink DIP (750 mil)	Standard
μPD78212GC-xxx-AB8	64-pin plastic QFP (14 × 14 mm)	Standard
μPD78212GJ-xxx-5BJ	74-pin plastic QFP (20 × 20 mm)	Standard
μPD78213GC-AB8	64-pin plastic QFP (14 × 14 mm)	Standard
μPD78213GJ-5BJ	74-pin plastic QFP (20 × 20 mm)	Standard
μPD78213GQ-36	64-pin plastic QUIP	Standard
μPD78213L	68-pin plastic QFJ (□950 mil)	Standard
μPD78214CW-xxx	64-pin plastic shrink DIP (750 mil)	Standard
μPD78214GC-xxx-AB8	64-pin plastic QFP (14 × 14 mm)	Standard
μPD78214GJ-xxx-5BJ	74-pin plastic QFP (20 × 20 mm)	Standard
μPD78214GQ-xxx-36	64-pin plastic QUIP	Standard
μPD78214L-xxx	68-pin plastic QFJ (□950 mil)	Standard

**Remarks** "xxx" means the specified ROM code.

Please refer to "Quality grade on NEC Semiconductor Devices" (Document number IEI-1209) published by NEC Corporation to know the specification of quality grade on the devices and its recommended applications.

## 78K/II PRODUCT LINE-UP DIAGRAM

# FUNCTION LIST

Product Name		μPD78213	μPD78212	μPD78214
Item				
Basic instruction (Mnemonic)		65		
Minimum instruction execution time (at 12 MHz operation)		500 ns	333 ns	
On-chip memory capacity	ROM	ROM-less	8K bytes	16K bytes
	RAM	512 bytes	384 bytes	512 bytes
Memory space		Program memory: 64K bytes, data memory: 1M byte		
I/O pins	Input	14		
	Output	12		
	I/O	10	28	
	Total	36	54	
Pins with additional function*	Pin with pull-up resistor	10	34	
	LED direct drive output	—	16	
	Transistor direct drive output	8		
ROM-less mode setting		ROM-less product	EA pin = High-level	
Real-time output port		4 bits × 2 or 8 bits × 1		
General register		8 bits × 8 × 4 banks (memory mapping)		
Timer/counter	16-bit timer/counter	{ Timer register × 1 Capture register × 1 Compare register × 2		Pulse output enable ( Toggle output PWM/PPG output )
	8-bit timer/counter 1	{ Timer register × 1 Capture/compare register × 1 Compare register × 1		Pulse output enable ( Real-time output: 4 bits × 2 )
	8-bit timer/counter 2	{ Timer register × 1 Capture register × 1 Compare register × 2		Pulse output enable ( Toggle output PWM/PPG output )
	8-bit timer/counter 3	{ Timer register × 1 Compare register × 1		—
Serial interface		UART : 1 channel (specialized baud rate generator incorporated) CSI (3-wire serial I/O, SBI) : 1 channel		
A/D converter		8-bit resolution × 8 channels		
Interrupt		19 sources (external 7, internal 12) + BRK instruction Priority order of 2 levels (programmable) 2 types of servicing (vectored interrupt, macro service)		
Instruction set		16-bit operation Multiplication/division (8 bits × 8 bits, 16 bits ÷ 8 bits) Bit manipulation BCD adjustment, others		
Package		64-pin plastic shrink DIP (750 mil) 64-pin plastic QUP (except μPD78212) 68-pin plastic QFJ (except □950 mil and μPD78212) 64-pin plastic QFP (14 × 14 mm) 74-pin plastic QFP (20 × 20 mm)		

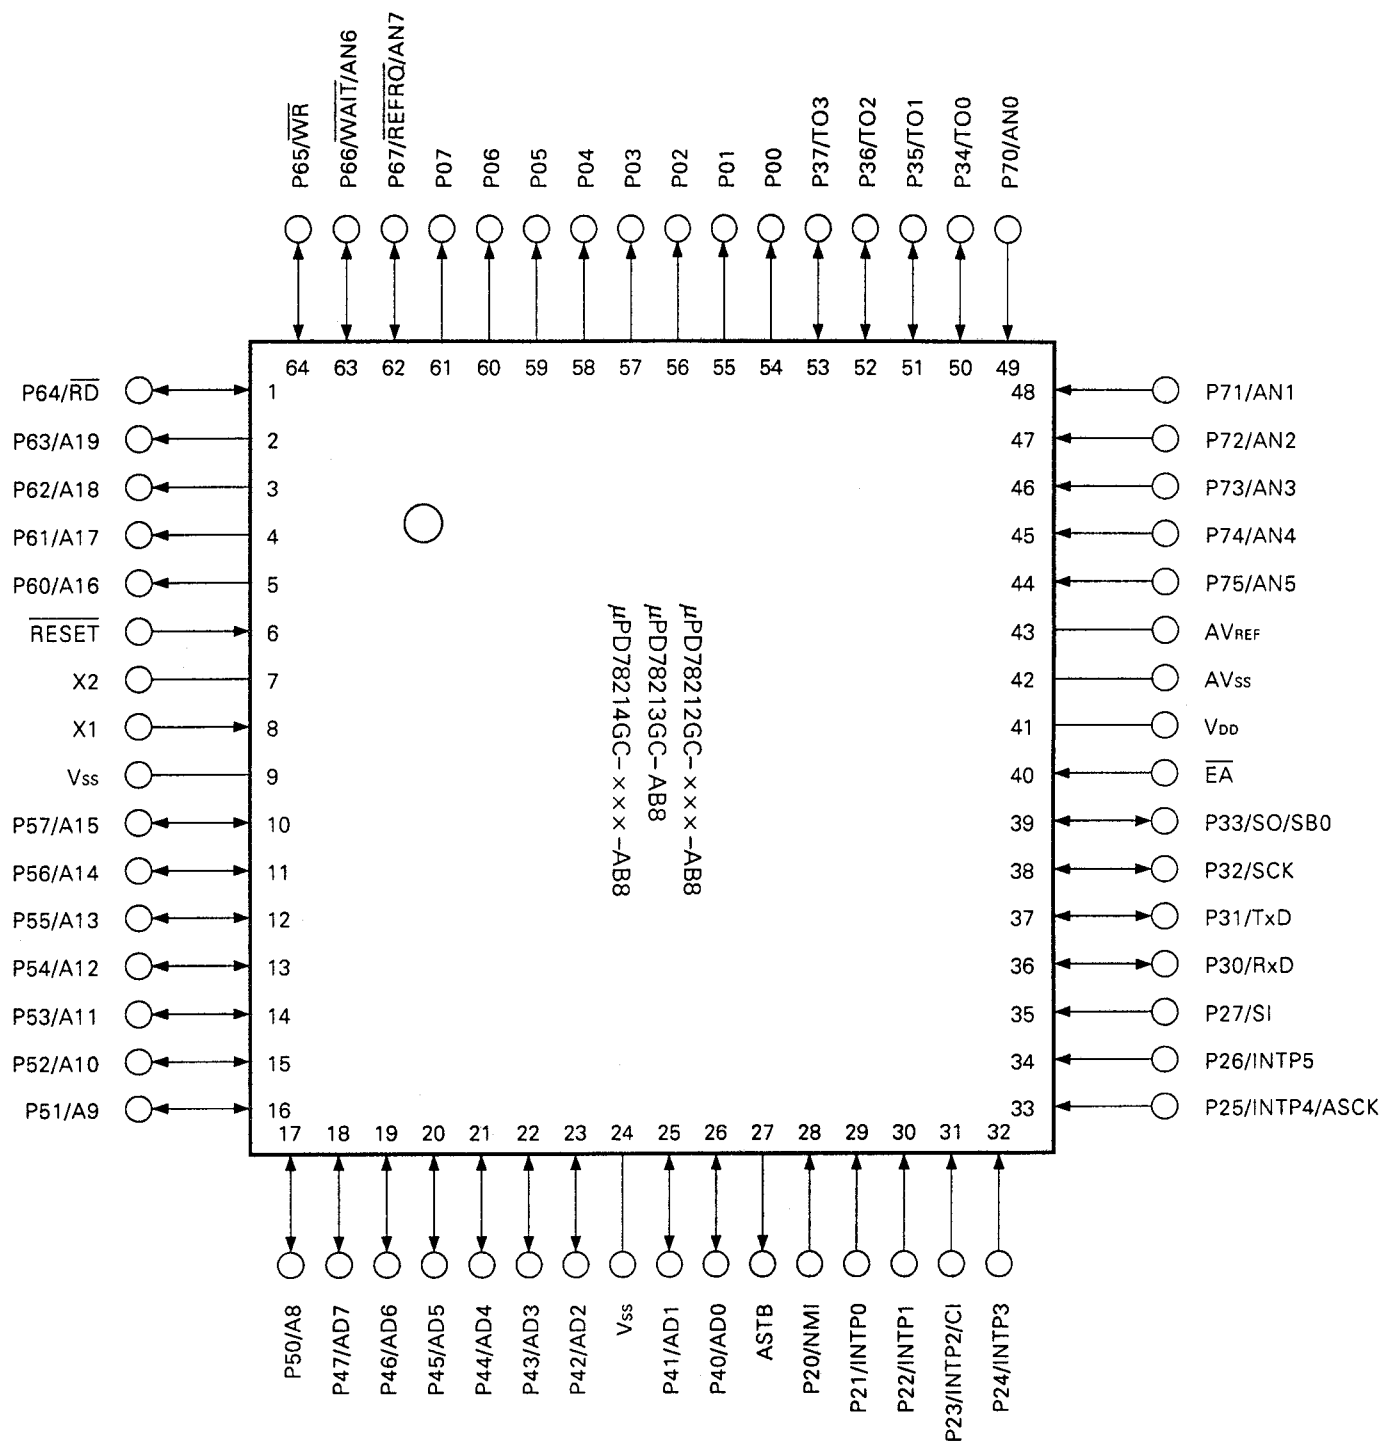

\* Pins with additional function included in the I/O pin.

PIN CONFIGURATION (TOP VIEW)

64-pin plastic shrink DIP, 64-pin plastic QUIP

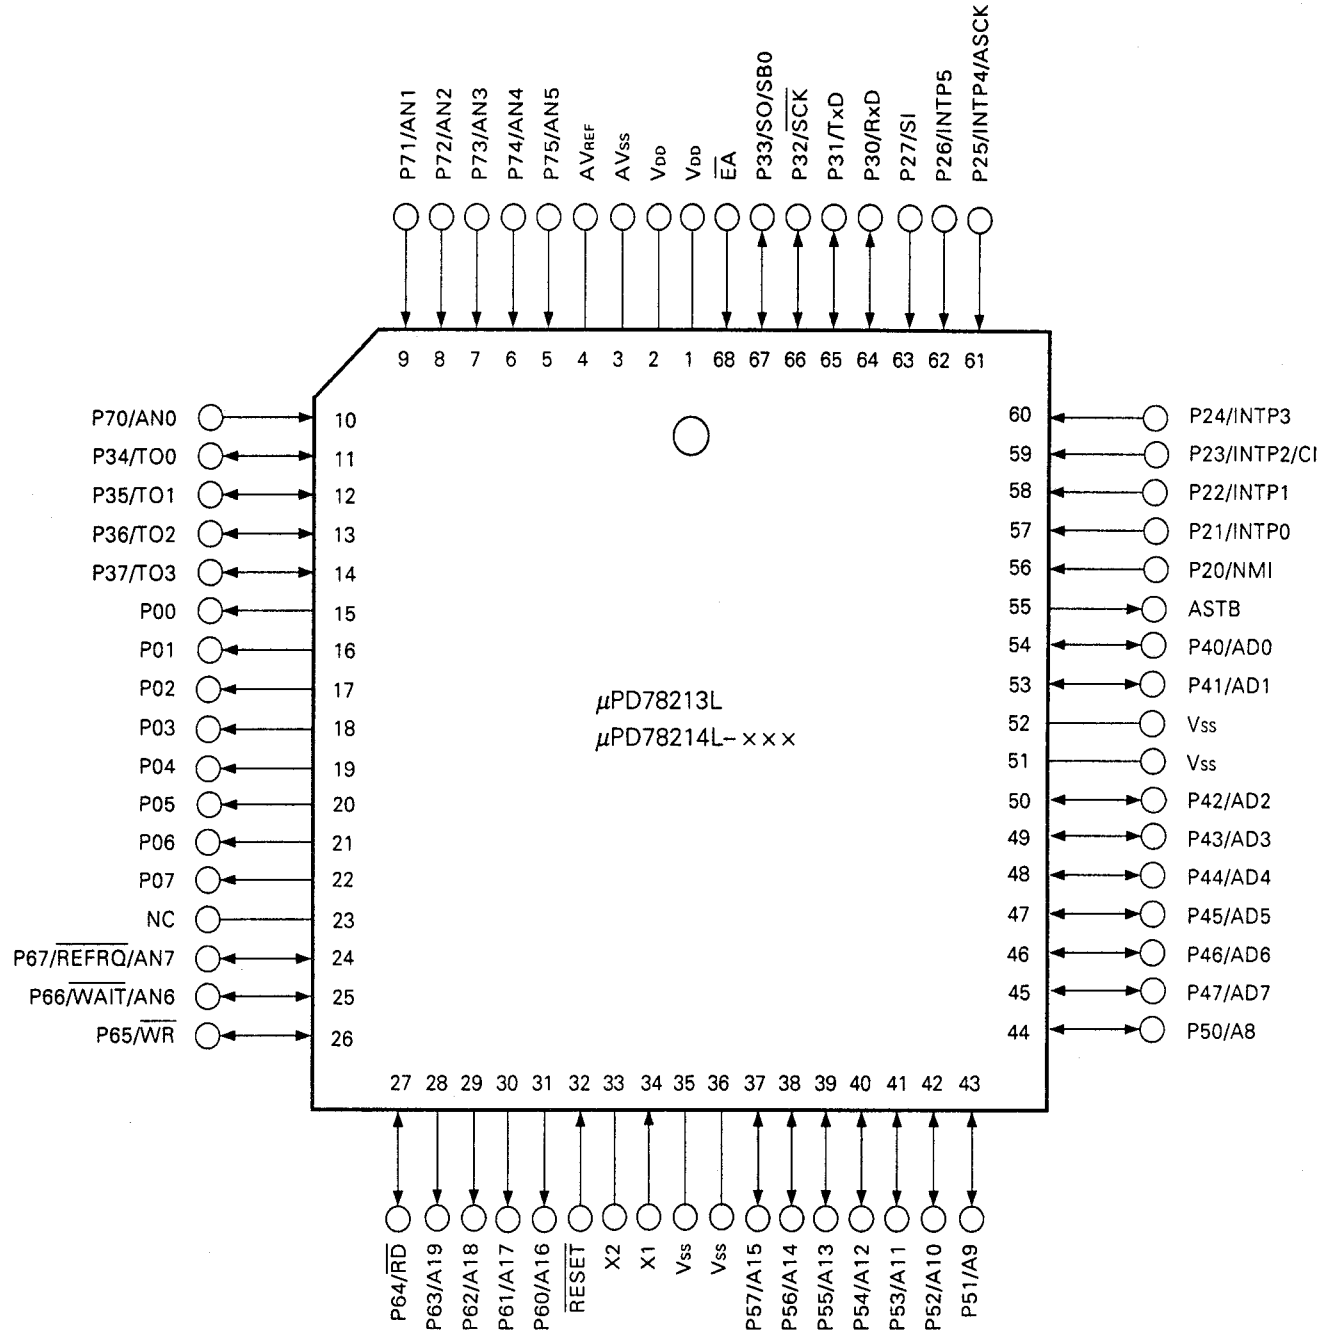

64-pin plastic QFP

## 74-pin plastic QFP

68-pin plastic QFJ

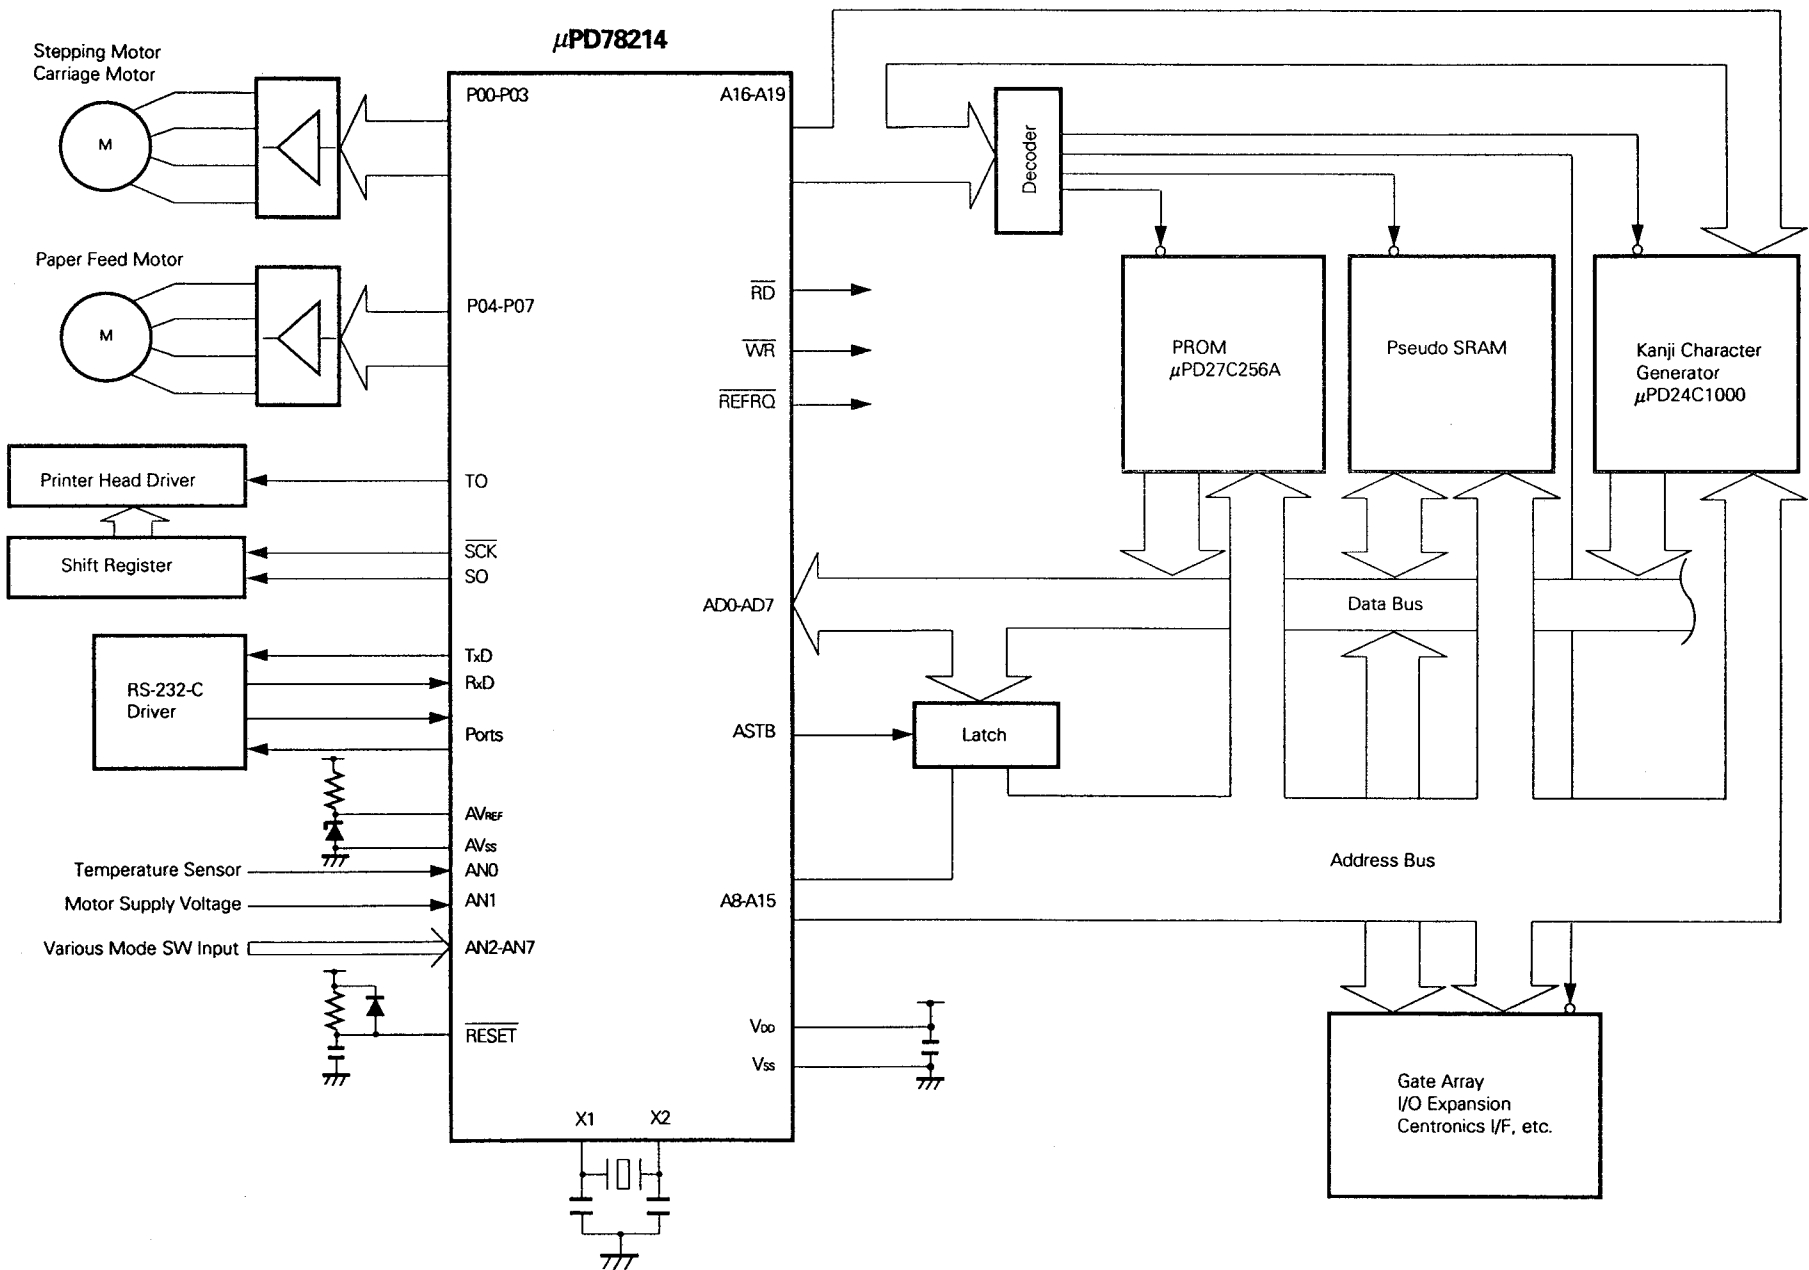

P00 to P07 : Port 0  
 P20 to P27 : Port 2  
 P30 to P37 : Port 3  
 P40 to P47 : Port 4  
 P50 to P57 : Port 5  
 P60 to P67 : Port 6  
 P70 to P75 : Port 7  
 TO0 to TO3 : Timer Output  
 CI : Clock Input  
 RxD : Receive Data  
 TxD : Transmit Data  
 SCK : Serial Clock  
 ASCK : Asynchronous Serial Clock  
 SB0 : Serial Bus  
 SI : Serial Input  
 SO : Serial Output  
 NMI : Non-maskable Interrupt  
 INTP0 to INTP5 : Interrupt From Peripherals  
 AD0 to AD7 : Address/Data Bus  
 A8 to A19 : Address Bus

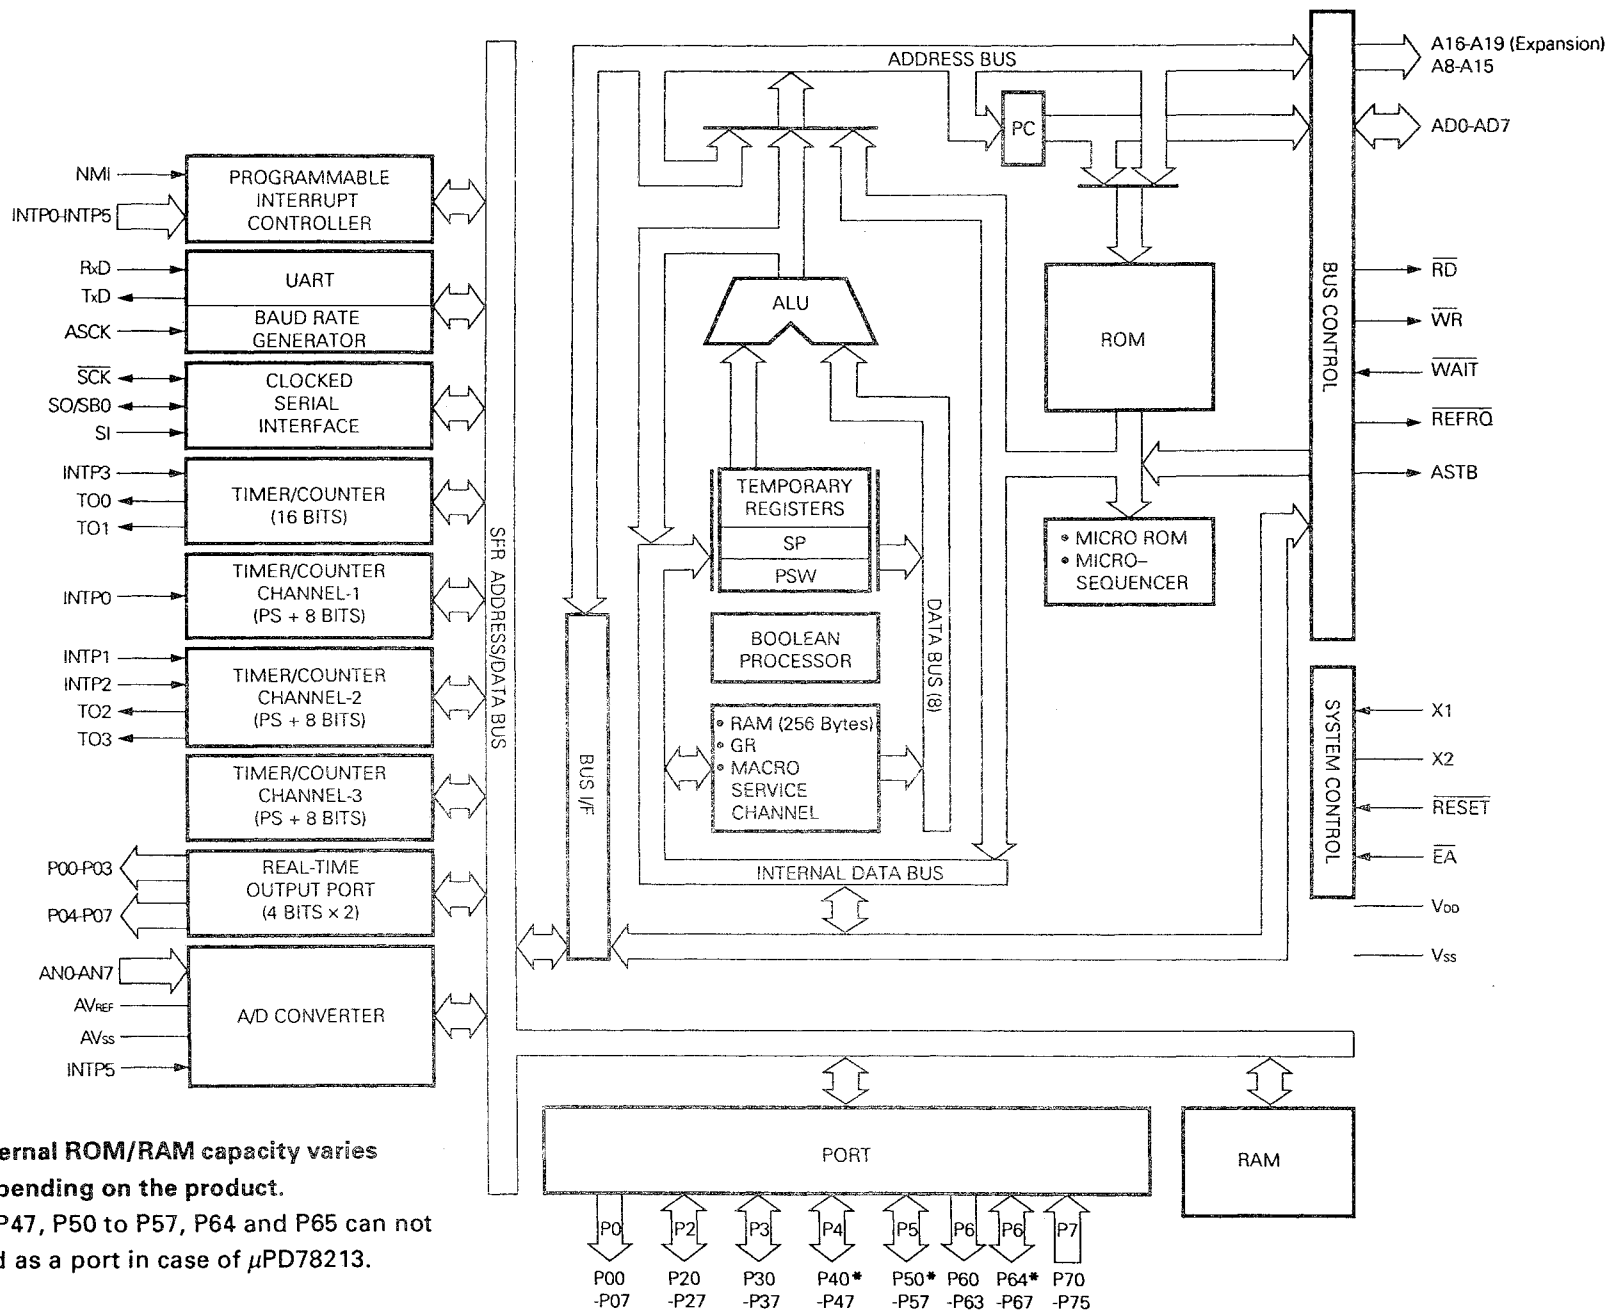

RD : Read Strobe  
 WR : Write Strobe  
 WAIT : Wait  
 ASTB : Address Strobe  
 REFRO : Refresh Request  
 RESET : Reset  
 X1, X2 : Crystal  
 EA : External Access  
 AN0 to AN7 : Analog Input  
 AV<sub>REF</sub> : Reference Voltage  
 AV<sub>SS</sub> : Analog Ground  
 V<sub>DD</sub> : Power Supply  
 V<sub>SS</sub> : Ground  
 NC : Non-connection

SYSTEM CONFIGURATION EXAMPLE (PRINTER)

## INTERNAL BLOCK DIAGRAM

**Note** Internal ROM/RAM capacity varies depending on the product.

\* P40 to P47, P50 to P57, P64 and P65 can not be used as a port in case of μPD78213.

## 1. PIN FUNCTIONS

### 1.1 PORTS

Pin Name	I/O	Dual-Function Pin	Function
P00 to P07	Output	—	Port 0 (P0): Established as a real-time output port (4 bits $\times$ 2) Direct drive of transistors capability
P20	Input	NMI	Port 2 (P2): P20 cannot be used as a general-purpose port. (Non-maskable interrupt) However, the input level can be confirmed in the interrupt routine. The connection of the on-chip pull-up resistor can be specified as a 6-bit batch for P22 to P27 by software.
P21		INTP0	
P22		INTP1	
P23		INTP2/CI	
P24		INTP3	
P25		INTP4/ASCK	
P26		INTP5	
P27		SI	
P30	Input/output	RxD	Port 3 (P3): The input/output specifiable bit-wise. Input mode pins specifiable for on-chip pull-up resistor connection as a batch by software.
P31		TxD	
P32		SCK	
P33		SO/SB0	
P34 to P37		TO0 to TO3	
P40 to P47*	Input/output	AD0 to AD7	Port 4 (P4): The input/output specifiable as an 8-bit batch. The connection of the on-chip pull-up resistor specifiable as an 8-bit batch by software. LED direct drive capability.
P50 to P57*	Input/output	A8 to A15	Port 5 (P5): The input/output specifiable bit-wise. Input mode pins specifiable for on-chip pull-up resistor connection as a batch by software. LED direct drive capability.
P60 to P63	Output	A16 to A19	Port 6 (P6): P64 to P67 enables to specify the input/output bit-wise. The connection of the on-chip pull-up resistor can be specified as a batch for P64 to P67 by software.
P64*	Input/output	$\overline{\text{RD}}$	
P65*		$\overline{\text{WR}}$	
P66		$\overline{\text{WAIT/AN6}}$	
P67		$\overline{\text{REFRQ/AN7}}$	
P70 to P75	Input	AN0 to AN5	Port 7 (P7)

\* Can not be used as a port in case of the  $\mu$ PD78213.

## 1.2 OTHER PORTS

Pin Name	I/O	Function	Dual-Function Pin
TO0 to TO3	Output	Timer output	P34 to P37
CI	Input	Count clock input to 8-bit timer/counter 2	P23 /INTP2
RxD	Input	Serial data input (UART)	P30
TxD	Output	Serial data output (UART)	P31
ASCK	Input	Baud rate clock input (UART)	P25/INTP4
SB0	Input/output	Serial data input/output (SBI)	P33/SO
SI	Input	Serial data input (3-wire serial I/O)	P27
SO	Output	Serial data output (3-wire serial I/O)	P33/SB0
̄SCK	Input/output	Serial clock input/output (SBI, 3-wire serial I/O)	P32
NMI	Input	External interrupt request	P20
INTP0			P21
INTP1			P22
INTP2			P23/CI
INTP3			P24
INTP4			P25/ASCK
INTP5			P26
AD0 to AD7	Input/output	Time multiplexing address/data bus (external memory connection)	P40 to P47*
A8 to A15	Output	Upper address bus (external memory connection)	P50 to P57*
A16 to A19	Output	Upper address when extending address (external memory connection)	P60 to P63
̄RD	Output	Read strobe into external memory	P64*
̄WR	Output	Write strobe into external memory	P65*
̄WAIT	Input	Wait insertion	P66/AN6
ASTB	Output	Output Address (A0 to A7) latch timing output (at external memory accessed)	—
̄REFRQ	Output	Refresh pulse output into external pseudo-static memory	P67/AN7
̄RESET	Input	Chip reset	—
X1	Input	Crystal connection for system clock oscillation (capability of clock input to X1)	—
X2	—		
̄EA	Input	ROM-less operating specification (external access of the same space as internal ROM). This is used by high level in the μPD78212 and 78214, low level in the μPD78213.	—
AN0 to AN5	Input	Analog voltage input for A/D converter	P70 to P75
AN6, AN7			P66/̄WAIT, P67/̄REFRQ
AVREF	—	Reference voltage apply for A/D converter	—
AVss		GND for A/D converter	—
VDD		Positive power supply pin	
Vss		GND pin	
NC		Not connected internally	

\* Can not be used as a port in case of the μPD78213.

### 1.3 PIN I/O CIRCUITS AND RECOMMENDED CONNECTION OF UNUSED PINS

The input/output circuit type of each pin and recommended connection of unused pins are shown in Table 1-1.  
For the input/output circuit configuration of each type, see Fig. 1-1.

**Table 1-1 Input/Output Circuit Type of Each Pin and Recommended Connection of Unused Pins**

Pin Name	Input/Output Circuit Type	I/O	Recommended Connection when not Used
P00 to P07	4	Output	Leave open.
P20/NMI	2	Input	Connected to VDD or VSS.
P21/INTP0			
P22/INTP1	2-A		Connected to VDD.
P23/INTP2/CI			
P24/INTP3			
P25/INTP4/ASCK			
P26/INTP5			
P27/SI			
P30/RxD	5-A	Input/output	Input : Connected to VDD. Output : Leave open.
P31/TxD			
P32/SCK	8-A		
P33/SR0/SO	10-A		
P34/TO0 to P37/TO3	5-A		
P40/AD0 to P47/AD7			
P50/A8 to P57/A15			
P60/A16 to P63/A19	4	Output	Leave open.
P64/RD	5-A	Input/output	Input : Connected to VDD.
P65/WR			Output : Leave open.
P66/WAIT/AN6	11		Input : Connected to VDD.*
P67/REFRQ/AN7			Output : Leave open.
P70/AN0 to P75/AN5	9	Input	Connected to VSS.
ASTB	4	Output	Leave open.
RESET	2	Input	
EA	1		
AVREF			Connected to VSS or VDD.*
AVss			Connected to VSS.

★ **Note** If the input and output are not stable on the dual-function pin as input and output, connect to VDD via a resistor of tens of k. (Especially, if the reset input pin exceeds the low level input voltage at power-on or in case of change the input/output by software.)

**Remarks** The type numbers are standardized by 78K series, therefore they are not always consecutive numbers in each product. (Some circuits are not incorporated.)

- \* In the following status, do not apply a voltage outside the range  $AV_{SS}$  to  $AV_{REF}$  to relevant pins, as the  $\mu$ PD78212, 78213 and 78214 may be damaged.

Status	Pins
A/D conversion operation	Pins for A/D conversion
A/D converter not used (or not operated)	<p>Pins selected by the A/D converter mode register (ADM)</p> <ul style="list-style-type: none"><li>• MS bit = 1 → Pins which are A/D converted when A/D conversion is specified</li><li>• MS bit = 0 → AN0 pin</li></ul>

When the A/D converter is not used, if the  $AV_{REF}$  pin is fixed at the  $V_{SS}$  level, the AN0 (P70) pin is automatically selected after  $\overline{RESET}$  input. Fix the AN0 pin at the  $V_{SS}$  level, or set the  $AV_{REF}$  pin to the  $V_{DD}$  level, and set the AN0 pin level to the  $AV_{REF}$  level or below.

Fig. 1-1 Pin Input/Output Circuits

## 2. INTERNAL BLOCK FUNCTION

### 2.1 MEMORY SPACE

The  $\mu$ PD78212, 78213 and 78214 can access a 1M-byte memory space. The Fig. 2-1 and 2-2 show that memory space. The program memory mapping depends on the  $\overline{EA}$  pin status.

#### (1) In case of the $\mu$ PD78212

The program memory is mapped into the internal ROM (8K bytes: 00000H to 01FFFFH) and the external memory (56704 bytes: 02000H to 0FD7FH). The external memory is accessed by the external memory expansion mode. The mapping area into the external memory is shareable with the data memory.

The data memory is mapped into the internal RAM (384 bytes: 0FD80H to 0FEFFH). In the 1M byte extended mode, the external memory (960K bytes: 10000H to FFFFFH) is mapped as the expansion data memory.

#### (2) In case of the $\mu$ PD78213

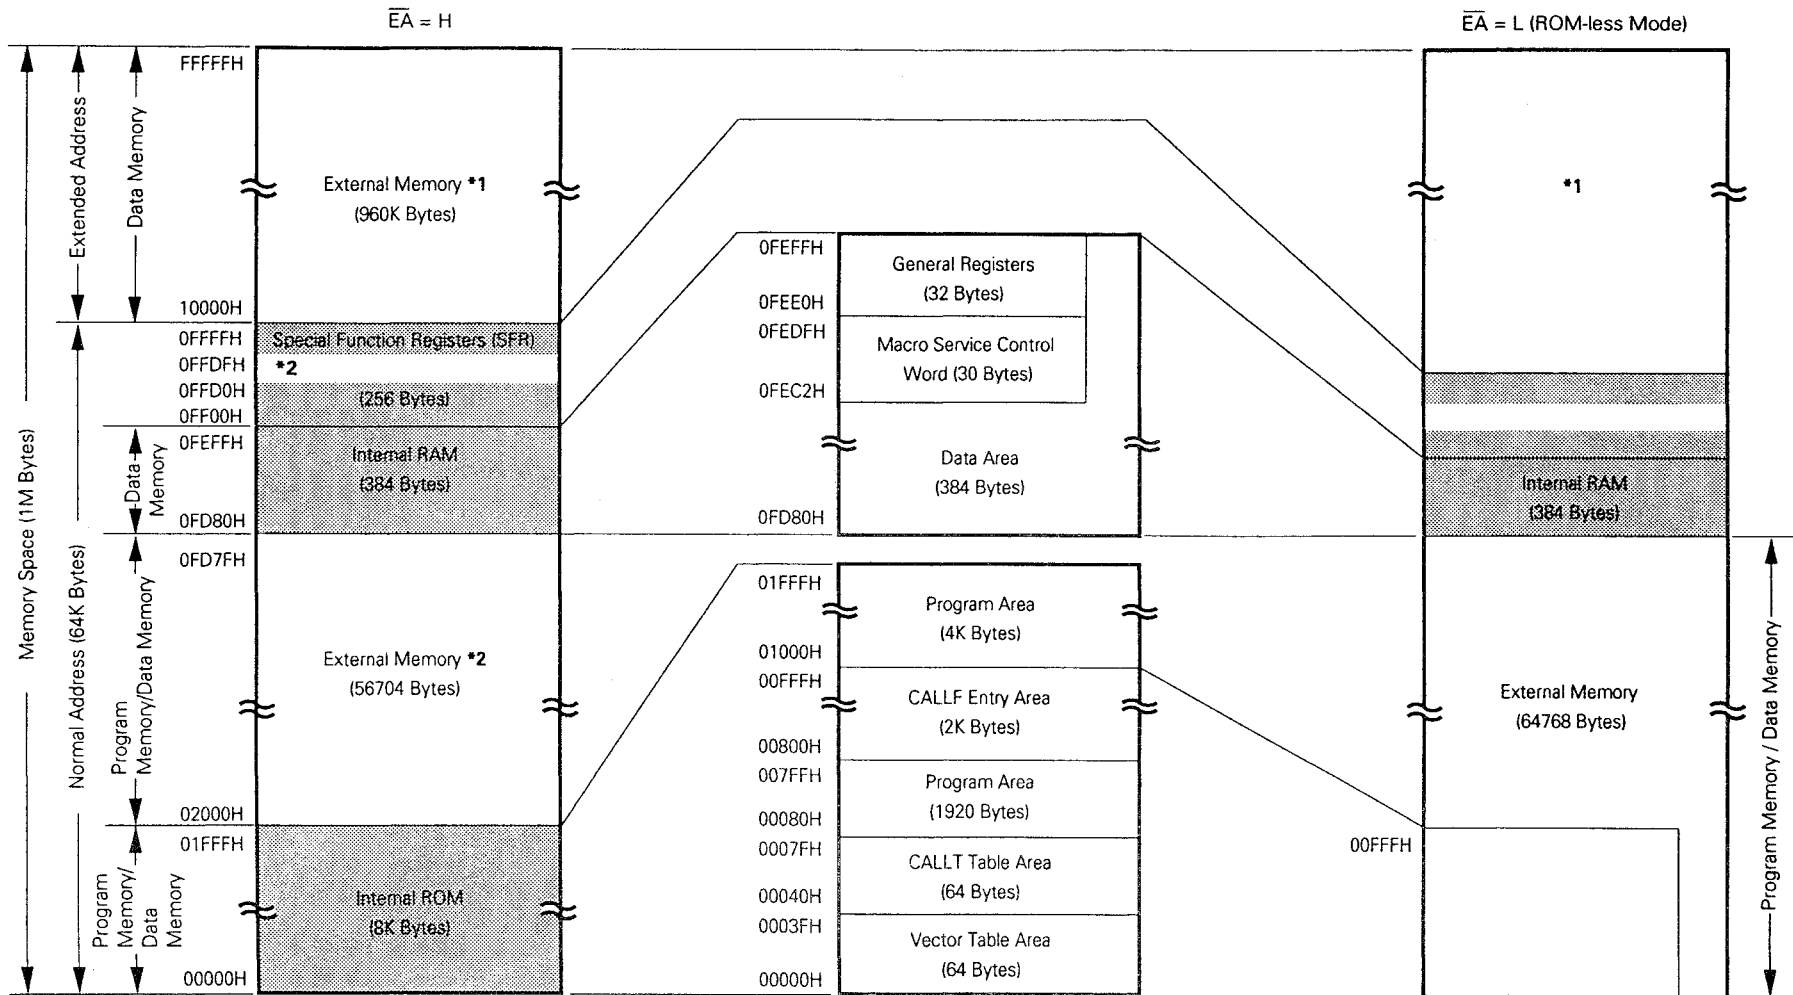

The program memory is mapped into the external memory (64768 bytes: 00000H to 0FCFFH). This area is shareable with a data memory.

The data memory has been mapped into the internal RAM (512 bytes: 0FD00H to 0FEFFH). In the 1M byte expansion mode, the external memory (960K bytes: 10000H to FFFFFH) is mapped as a expansion data memory.

#### (3) In case of the $\mu$ PD78214

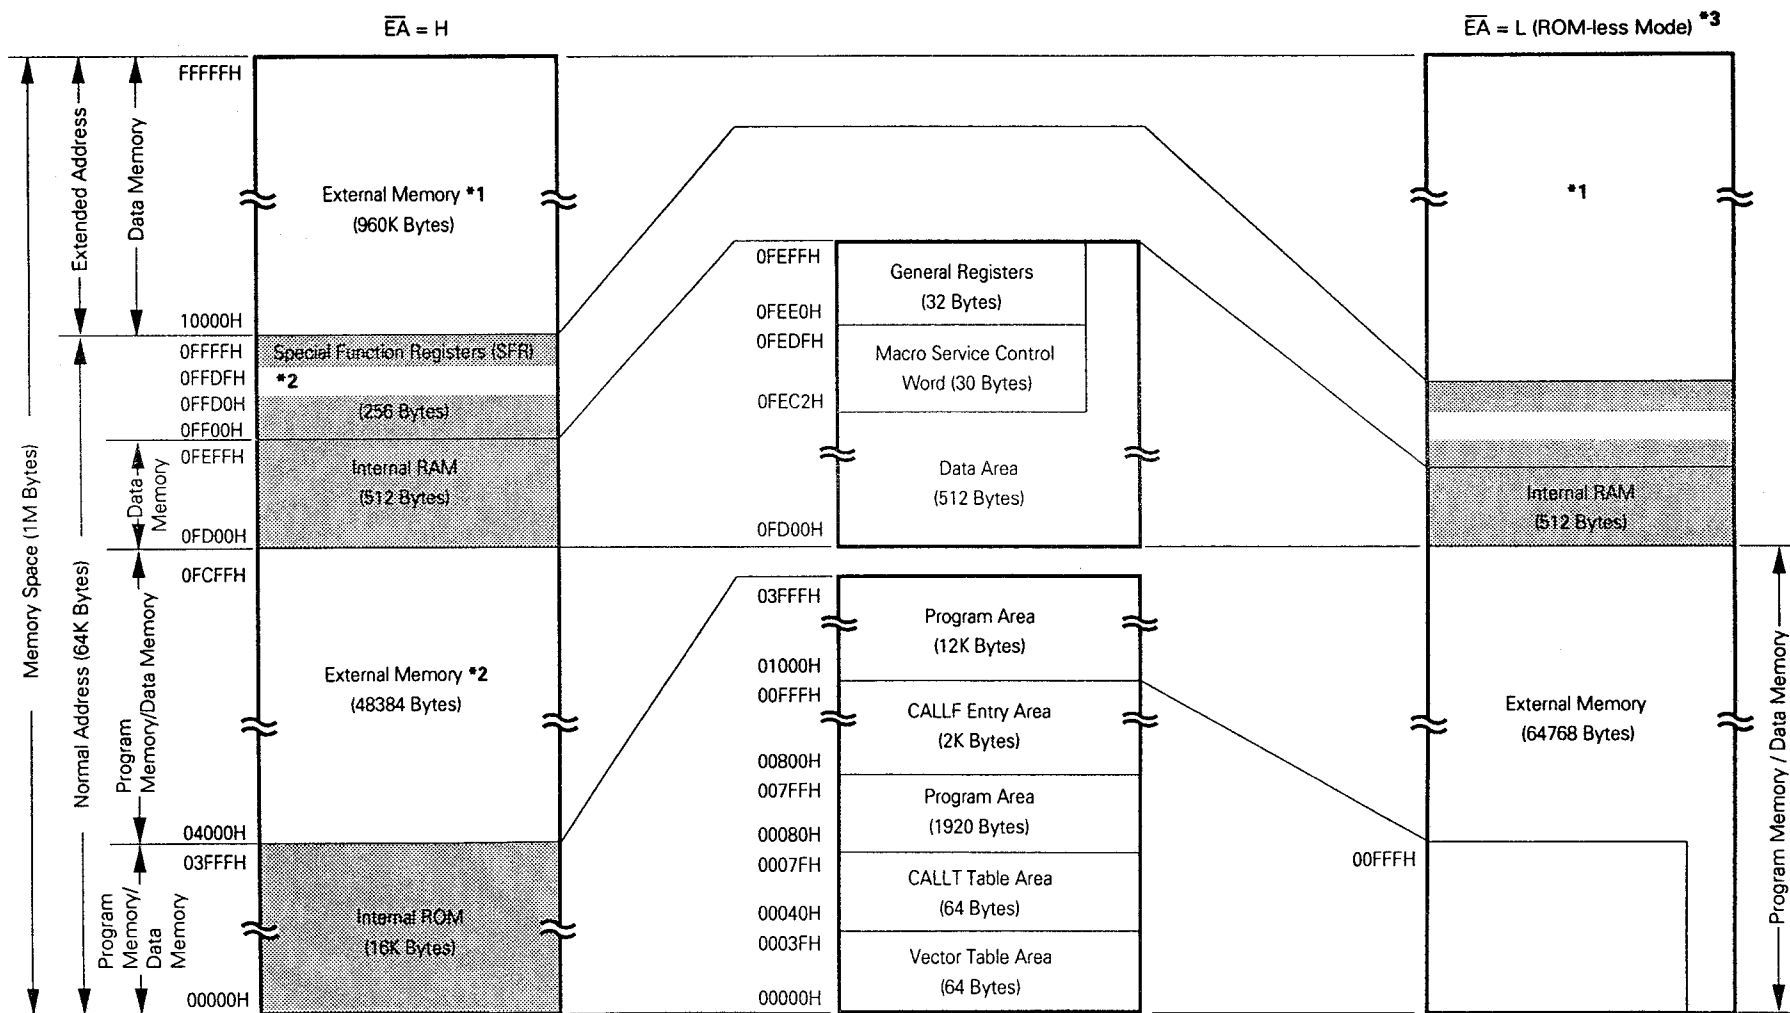

The program memory is mapped into the internal ROM (16K bytes: 00000H to 03FFFFH) and the external memory (48384 bytes: 04000H to 0FCFFH). The external memory is accessed by the external memory expansion mode. The mapping area into the external memory is shareable with the data memory.

The data memory has been mapped into the internal memory (512 bytes: 0FD00H to 0FEFFH). In the 1M byte extended mode, the external memory (960K bytes: 10000H to FFFFFH) is mapped as the expansion data memory.

Fig. 2-1  $\mu$ PD78212 Memory Map

- \* 1. Accessed by 1M-byte expansion mode. Shaded area denotes internal memory.  
 2. Accessed by external memory expansion mode.

Fig. 2-2 μPD78213/78214 Memory Map

- \* 1. Accessed by 1M-byte expansion mode. Shaded area denotes internal memory.
- \* 2. Accessed by external memory expansion mode.
- \* 3. μPD78213 only when  $\overline{EA} = L$

## 2.2 PORT

The  $\mu$ PD78212, 78213 and 78214 are equipped with ports as Fig. 2-3, operable for various controls. The function of each port describes Table 2-1. The port 2 to port 6 can be specified to use the on-chip pull-up resistor by software at power-on.

**Fig. 2-3 Port Configuration**

\* P40 to P47, P50 to P57, P64 and P65 can not be used as a port in case of the  $\mu$ PD78213.

Table 2-1 Port Function

Name	Pin Name	Function	Designation of Software Pull-Up
Port 0	P00 to P07	Outputs or high-impedance specifiable as an 8-bit batch. Operable as 4-bit real-time output (P00 to P03, P04 to P07). Transistor direct drive capability.	—
Port 2	P20 to P27	Input port	6-bit batch (P22 to P27)
Port 3	P30 to P37	Input or output specifiable bit-wise	Input mode pins specifiable as a batch.
Port 4*	P40 to P47	Input or output specifiable as an 8-bit batch. LED direct drive capability.	8-bit batch
Port 5*	P50 to P57	Input or output specifiable bit-wise. LED direct drive capability.	Input mode pins specifiable as a batch.
Port 6*	P60 to P63	Output port	—
	P64 to P67	Input or output specifiable bit-wise	Input mode pins specifiable as a batch.
Port 7	P70 to P75	Input port	—

\* P40 to P47, P50 to P57, P64 and P65 can not be used as a port in case of the μPD78213.

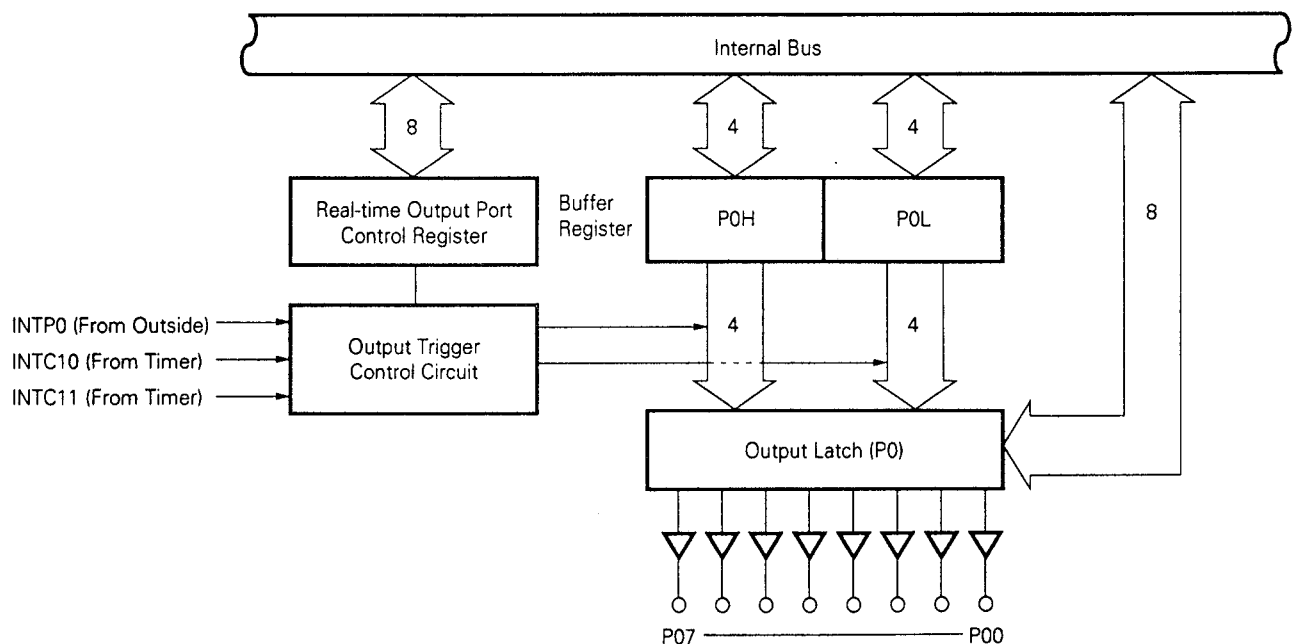

### 2.3 REAL-TIME OUTPUT PORT

The real-time output port outputs the data stored in the buffer in synchronization with a timer match interrupt or external interrupt. Therefore, a pulse output without jitter can be acquired.

Accordingly, this is suitable for the application (open loop control of a stepping motor, etc.) which outputs any pattern at any interval.

As Fig. 2-4, the port 0 and buffer register are the core of the configuration.

Fig. 2-4 Real-Time Output Port Block Diagram

## 2.4 TIMER/COUNTER UNIT

The μPD78212, 78213 and 78214 incorporate one channel of a 16-bit timer/ counter unit and 3 channels of an 8-bit timer/counter unit.

**Table 2-2 Types and Functions for Timer/Counter**

Unit Type & Function		16-Bit Timer/ Counter	8-Bit Timer/ Counter 1	8-Bit Timer/ Counter 2	8-Bit Timer/ Counter 3
Type	Interval timer	2ch	2ch	2ch	1ch
	External event counter	—	—	○	—
	One shot timer	—	—	○	—
Function	Timer output	2ch	—	2ch	—
	Toggle output	○	—	○	—
	PWM/PPG output	○	—	○	—
	Real-time output	—	○	—	—
	Pulse amplitude measurement	○	○	○	—
	Number of interrupt requests	2	2	2	1
	Clock source of serial interface	—	—	—	○

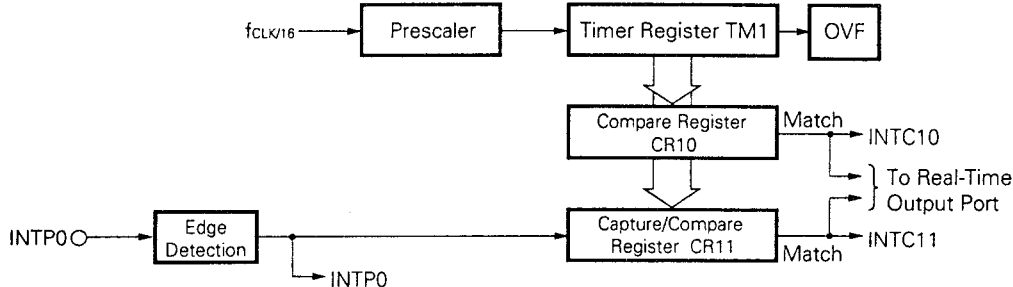

As 7 interrupt requests are supported in total, this functions as the timer of the 7 channels.

Fig. 2-5 Timer/Counter Unit Block Diagram

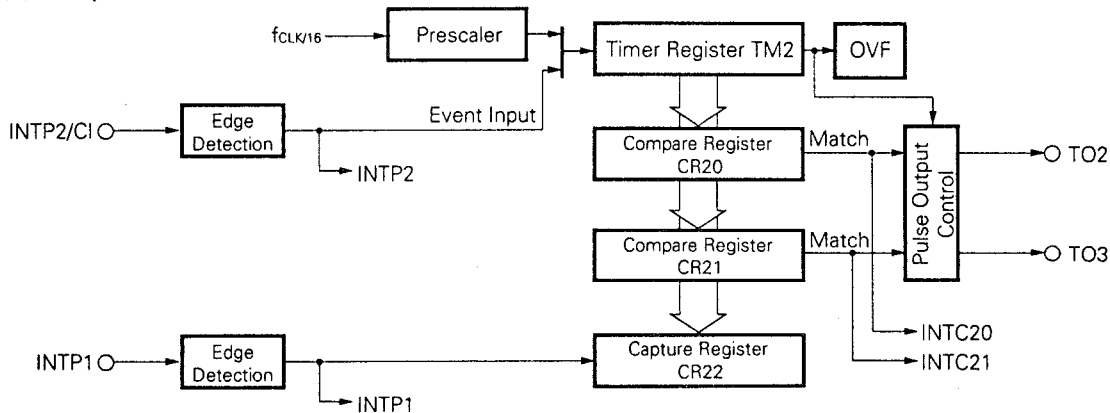

16-bit timer/counter unit

8-bit timer/counter unit 1

8-bit timer/counter unit 2

8-bit timer/counter unit 3

OVF : Overflow Flag

## 2.5 A/D CONVERTER

The  $\mu$ PD78212, 78213 and 78214 incorporate an analog/digital (A/D) converter with 8 multiplexed analog inputs (AN0 to AN7).

The conversion is a successive approximation and the conversion result is stored in the 8-bit A/D conversion result register (ADCR). Therefore, the conversion can be executed at high speed and accuracy (converting time 30  $\mu$ s approximately: At 12 MHz operation).

This prepares the following modes to start the A/D converting operation.

- Hardware start: Starts the conversion with a trigger input (INTP5).
- Software start: Starts the conversion by setting a bit of A/D converter mode register (ADM).

Also, the following modes are prepared for the operation after started.

- Scan mode : Selects analog inputs one after another and acquires the converted data from all pins.
- Select mode : Fixes analog inputs to one pin and acquires the continuous conversion value.

When stopping the above modes and the converting operation, all of them are specified by ADM.

The interrupt request (INTAD) occurs when the converted result is sent to ADCR, the interrupt request INTAD is generated (except the software start select mode). Therefore, by means of the macro service, the converted values can be sent into the memory continuously.

**Table 2-3 INTAD Generation Mode**

	Scan Mode	Select Mode
Hardware start	○	○
Software start	○	—

Fig. 2-6 A/D Converter Block Diagram

## 2.6 SERIAL INTERFACE

The  $\mu$ PD78212, 78213 and 78214 are equipped with 2 independent channels for serial interfaces.

Asynchronous serial interface (UART)

- Clocked serial interface (CSI)
- • 3-wire serial I/O
- Serial bus interface (SBI)

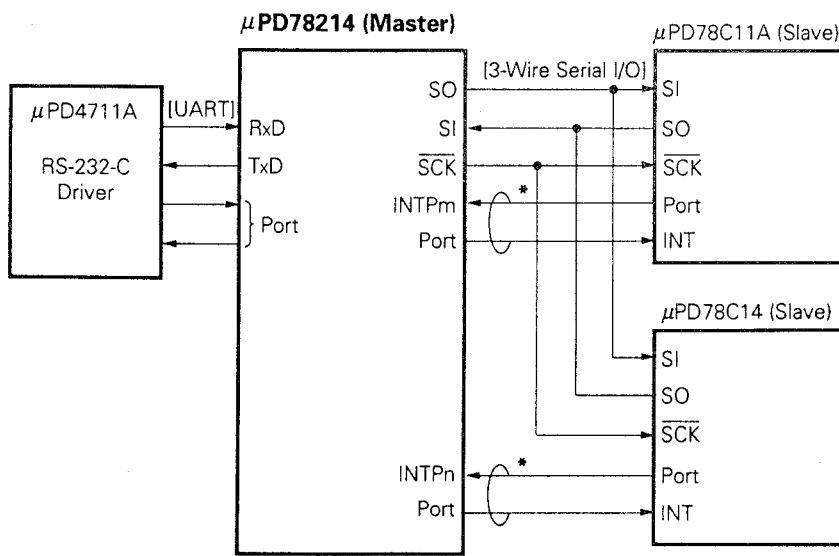

This enables both a communication with the external system and a local communication in the system simultaneously (see Fig. 2-7).

Fig. 2-7 Example of Serial Interface

(a) UART + SBI

(b) UART + 3-wire serial I/O

\* Handshake line

### 2.6.1 Asynchronous Serial Interface

A UART (Universal Asynchronous Receiver Transmitter) has been incorporated as an asynchronous serial interface. This is the method to transmit the one byte data following the start bit.

As UART dedicated baud rate generator is incorporated, communications are possible with a wide range of any baud rate.

Also, the baud rate can be defined by dividing the input clock for the ASCK pin.

Moreover, a baud rate can be generated with 8-bit timer/ counter 3.

If the UART dedicated baud rate generator is used, the baud rate (31.25 kbps) of the MIDI specification can be acquired.

Fig. 2-8 Asynchronous Serial Interface Block Diagram

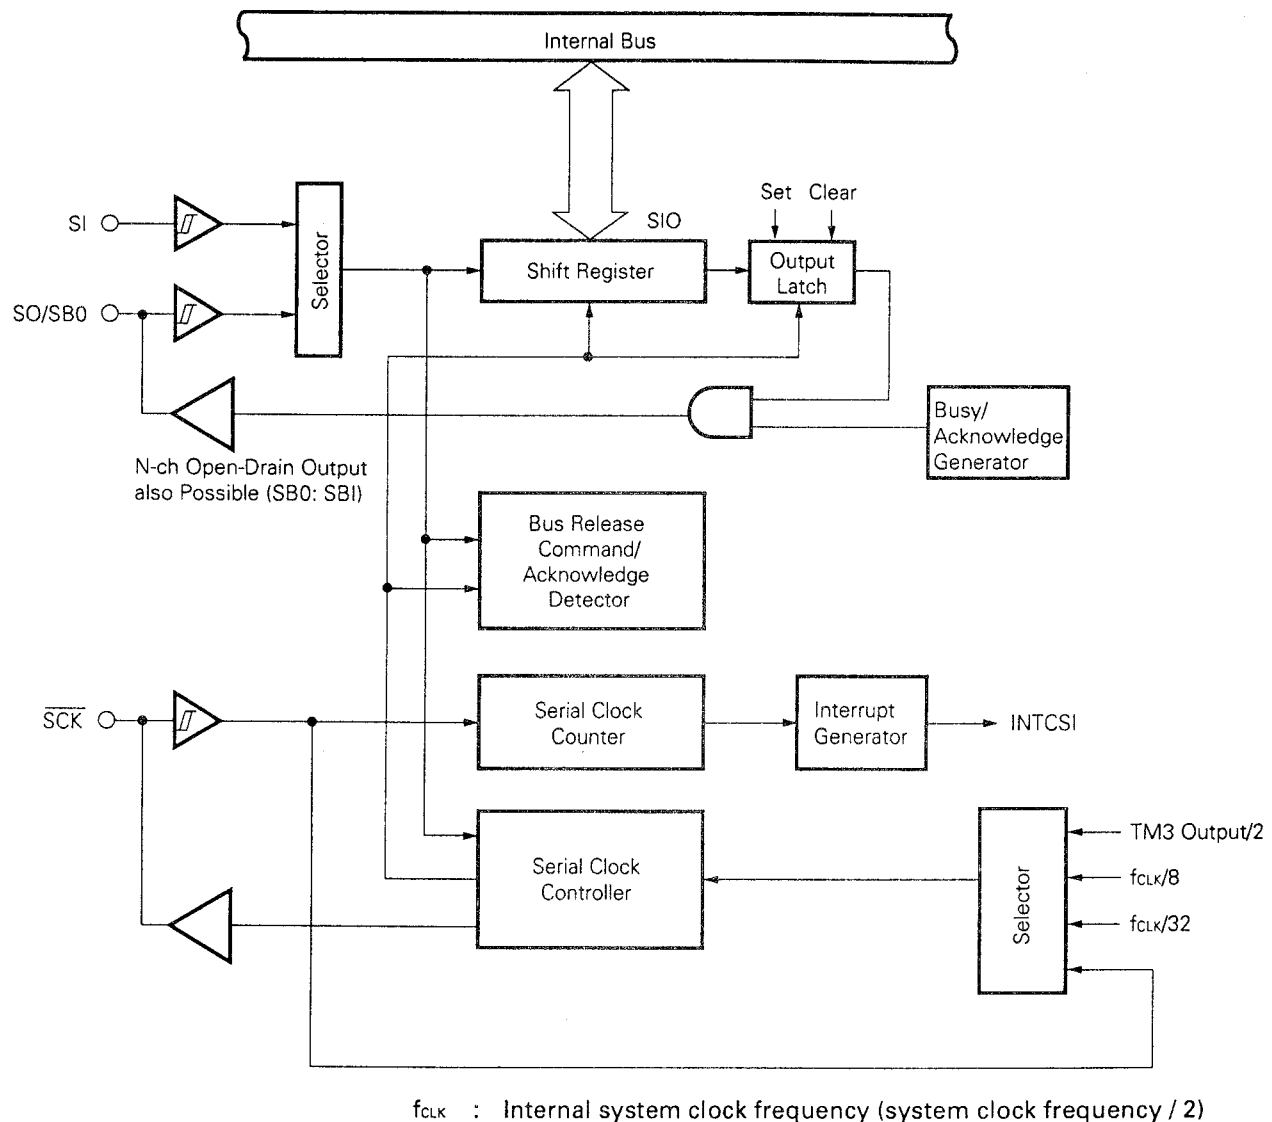

$f_{CLK}$  : Internal system clock frequency (system clock frequency / 2)

## 2.6.2 Clocked Serial Interface

This is a method to communicate one byte data in synchronization with the serial clock which is activated by master device and starts to transmit.

Fig. 2-9 Clocked Serial Interface Block Diagram

### (1) 3-wire serial I/O

This is an interface to communicate with a device which incorporates a conventional clocked serial interface.

Basically, the communication is made through 3 wires of serial clock ( $\overline{SCK}$ ) and serial data (SI, SO). In case of connecting with multiple devices, the handshake line is required.

### (2) SBI

This can communicate with multiple devices through 2 wires of serial clock ( $\overline{SCK}$ ) and serial bus (SB0) and this is a NEC standard serial interface.

The master device outputs "address" from the SB0 pin and selects the communicated slave device. Then, "command" and "data" are transmitted and received between the master and slave.

### 3. INTERNAL/EXTERNAL CONTROL FUNCTION

#### 3.1 INTERRUPT

The interrupt request servicing can be selected from 2 modes in the following table.

**Table 3-1 Interrupt Request Servicing**

Servicing Mode	Servicing Subject	Servicing	PC, PSW Contents
Vectored interrupt	Software	Branches to service routine, and executes (any servicing contents)	With save and return
Macro service	Firmware	Data transmission, etc. between memory and I/O (fixed servicing contents)	Hold

### 3.1.1 Interrupt Source

The interrupt source includes the 19 types and a BRK instruction execution as shown in Table 3-2.

The priority of the interrupt servicing can be set to 2 levels (high and low priority levels). Therefore, it can separate the levels of the nest control which the interrupt is in progress and the interrupt request which occurs simultaneously (see Fig. 3-1, Fig. 3-2). But the nesting advances certainly in the macro service (not held).

The default priority is the priority level (fixed) to service the interrupt requests which occur at the same level simultaneously (see Fig. 3-2).

**Table 3-2 Interrupt Source**

Type	Default Priority	Source		Internal/ External	Macro Service
		Name	Trigger		
Software	——	BRK	Instruction execution	——	—
Non-Maskable		NMI	Pin input edge detection	External	
Maskable	0 (highest)	INTP0	Pin input edge detection (TM1 capture trigger)		
	1	INTP1	Pin input edge detection (TM2 capture trigger)		
	2	INTP2	Pin input edge detection (TM2 event counter input)		
	3	INTP3	Pin input edge detection (TM0 capture trigger)		
	4	INTC00	TM0 to CR00 match signal generation	Internal	
	5	INTC01	TM0 to CR01 match signal generation		
	6	INTC10	TM1 to CR10 match signal generation		
	7	INTC11	TM1 to CR11 match signal generation		
	8	INTC21	TM2 to CR21 match signal generation	External	
	9	INTP4	Pin input edge detection		
		INTC30	TM3 to CR30 match signal generation	Internal	
	10	INTP5	Pin input edge detection	External	
		INTAD	A/D converter conversion termination (transfer to ADCR)	Internal	
	11	INTC20	TM2 to CR20 match signal generation		
	12	INTSER	ASI receive error generation		—
	13	INTSR	ASI receive termination		○
14	INTST	ASI transmit termination			
15 (lowest)	INTCSI	CSI transfer termination			

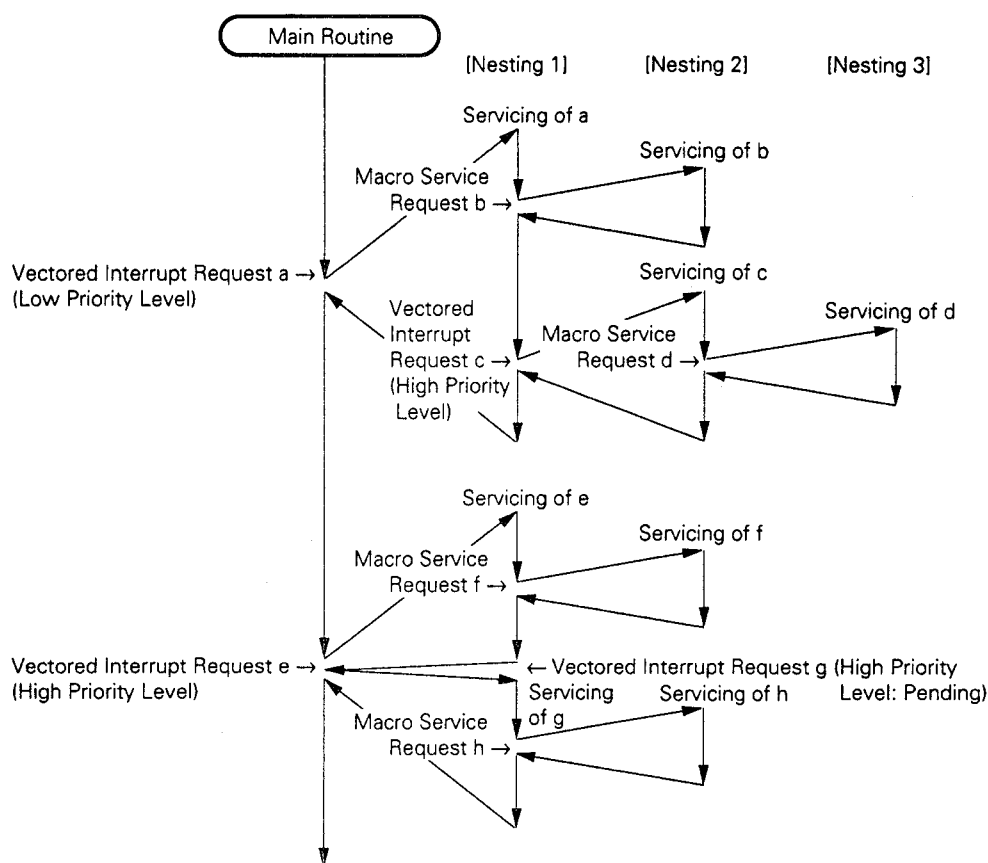

TM0 : 16-bit timer

TM1 to TM3 : 8-bit timer

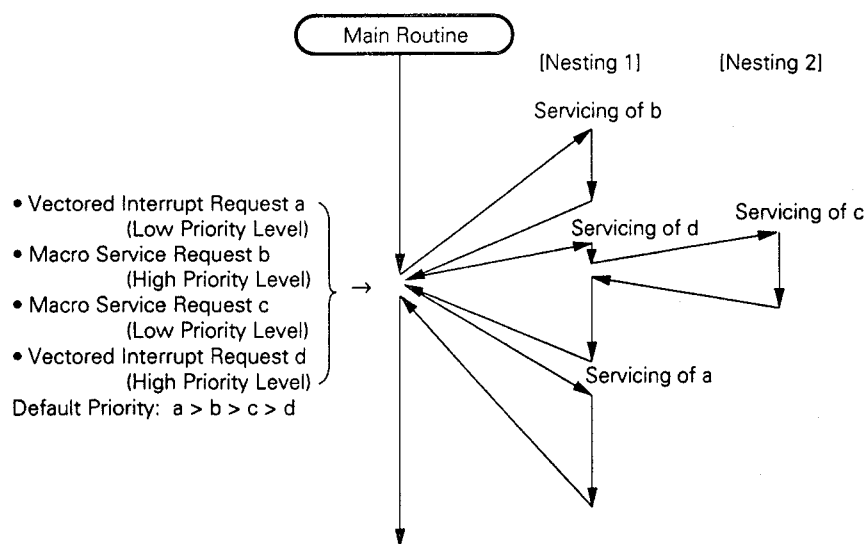

ASI : Asynchronous serial interface

CSI : Clocked serial interface

**Fig. 3-1 Servicing Example for Another Interrupt Request Occurrence while an Interrupt Servicing**

**Fig. 3-2 Servicing Example for Simultaneous Occurred Interrupt Request**

### 3.1.2 Vectored Interrupt

The memory contents of the vector table address, which corresponds to the interrupt source, is branched into the processing routine as a destination address.

As the CPU executes the interrupt servicing, the following operations occur.

- When branch: Saving the CPU status (PC, PSW contents) to the stack.
- When return: Returning the CPU status (PC, PSW contents) from the stack.

The RETI instruction executes returning to the main routine from the processing routine.

**Table 3-3 Vector Table Address**

Interrupt Source	Vector Table Address	Interrupt Source	Vector Table Address
BRK	003EH	INTC21	001CH
NMI	0002H	INTP4	000EH
INTP0	0006H	INTC30	
INTP1	0008H	INTP5	0010H
INTP2	000AH	INTAD	
INTP3	000CH	INTC20	0012H
INTC00	0014H	INTSER	0020H
INTC01	0016H	INTSR	0022H
INTC10	0018H	INTST	0024H
INTC11	001AH	INTCSI	0026H

### 3.1.3 Macro Service

This is a function to transfer the data between the memory and special function registers (SFR) not through the CPU. The macro service controller accesses the memory and SFR, and transfers directly without fetching data.

The high-speed data transfer is enabled because the CPU status is not saved/restored and no data is fetched.

**Fig. 3-3 Macro Service**

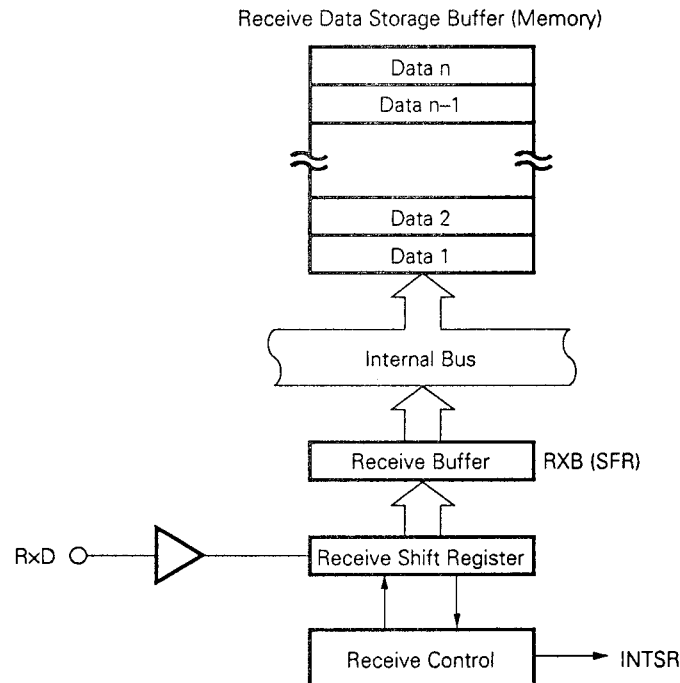

### 3.1.4 Macro Service Application Example

#### (1) Transmit operation of serial interface

Whenever the macro service request INTST is generated, the next send data is transferred to TXS from the memory. When the data n (last byte) is transferred to TXS (The send data storage buffer becomes empty.), a vectored interrupt request INTST is generated.

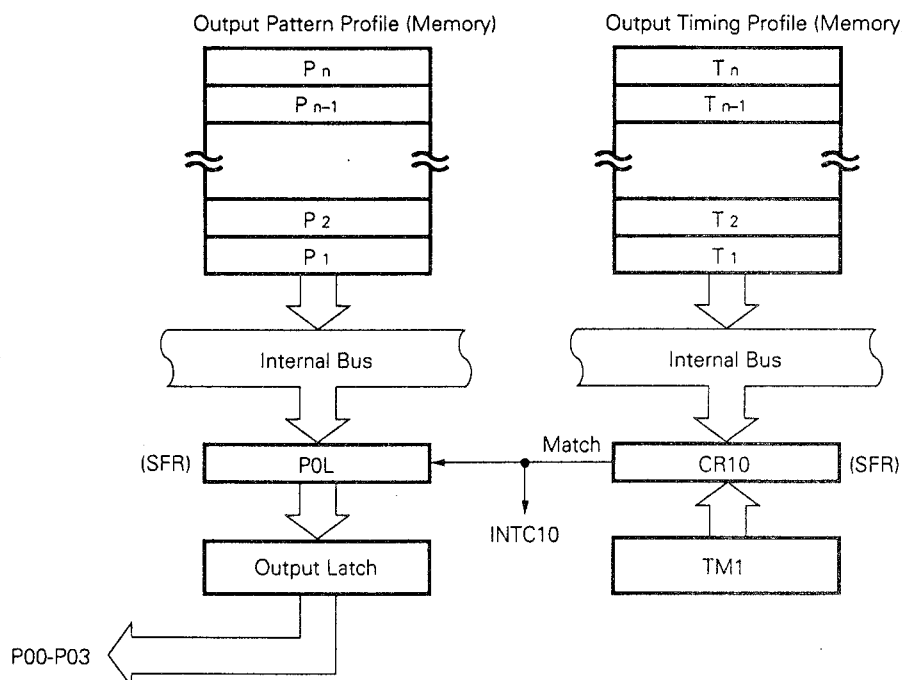

#### (2) Receive operation of serial interface

Whenever the macro service request INTSR is generated, the receive data is transferred to the memory from RXB. When the data n (last byte) is transferred to the memory (There will not be enough space in the receive data storage buffer.), the vectored interrupt request INTSR is generated.

### (3) Real-time output port

The INTC10 and INTC11 become output triggers of the real-time output port. In the macro service to them, the next output pattern and interval can be set simultaneously. Therefore, the INTC10 and INTC11 can control 2-system stepping motor independently. Also, it can be applied to control a PWM or DC motor, etc.

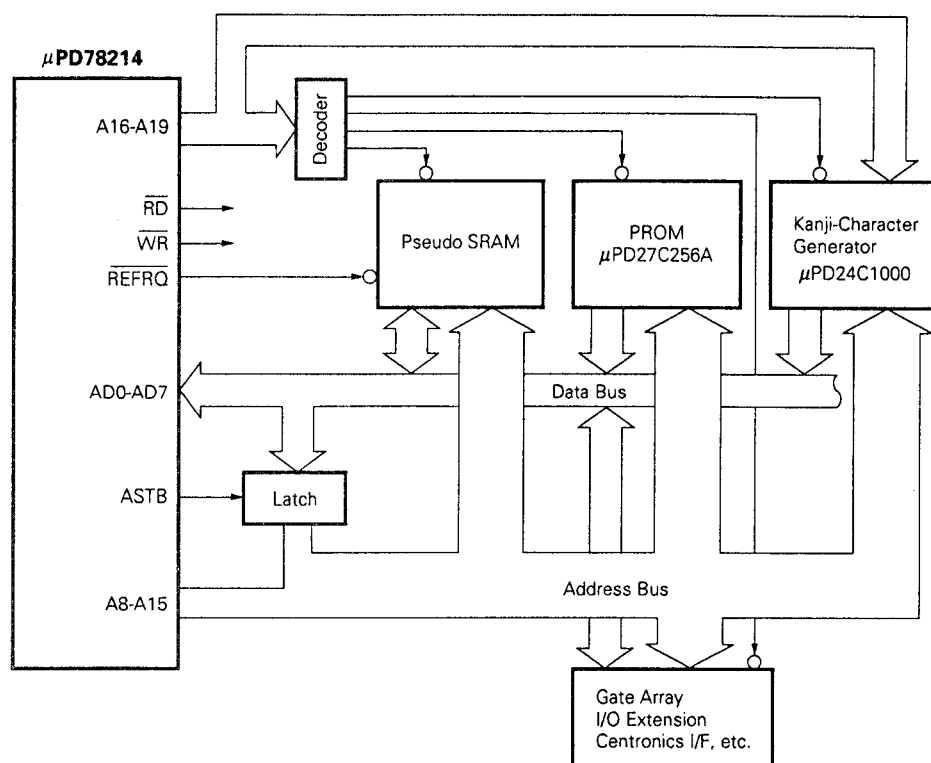

Whenever the macro service request INTC10 is generated, the pattern and timing are transferred to POL and CR10 respectively. When the contents of the TM1 match with the contents of the CR10, the next INTC10 is generated and the contents of the POL is sent to the output latch. If  $T_n$  (last byte) is sent to CR10, a vectored interrupt request INTC10 is generated.

The same operation is available for INTC11 (different point:  $CR10 \rightarrow CR11$ ,  $POL \rightarrow P0H$ ,  $P00$  to  $P03 \rightarrow P04$  to  $P07$ ).

### 3.2 LOCAL BUS INTERFACE

The  $\mu$ PD78212, 78213 and 78214 can be connected a memory and an I/O (memory mapped I/O) externally and supports the 1M-byte memory space (see Fig. 2-1 and Fig. 2-2).

Fig. 3-4 Local Bus Interface Example

#### 3.2.1 Memory Expansion

The following modes have been prepared as a memory expansion function.

- External memory expansion mode:  
Expands the program memory and data memory to 48384 bytes (56704 bytes in case of the  $\mu$ PD78212) externally. But this area can be used unconditionally under the ROM-less mode ( $\overline{EA} = L$ ).
- 1M-byte expansion mode:  
Expands the data memory by 960K bytes and become a 1M-byte memory space.

#### 3.2.2 Programmable Wait

A wait can be independently inserted to the memory mapped on both a normal address (00000H to 0FFFFH) and an extended address (10000H to FFFFFH). Therefore, the efficiency of the entire system is not decreased even if a memory with different access time is connected.

#### 3.2.3 Pseudo-Static RAM Refresh Function

The refresh operations are as follows.

- Pulse refresh:  
Outputs the refresh pulse to  $\overline{REFRQ}$  pin in synchronization with a bus cycle.
- Power-down self refresh:  
Outputs a low-level to the  $\overline{REFRQ}$  pin in the standby mode and holds the contents of the pseudo-static RAM.

### 3.3 STANDBY

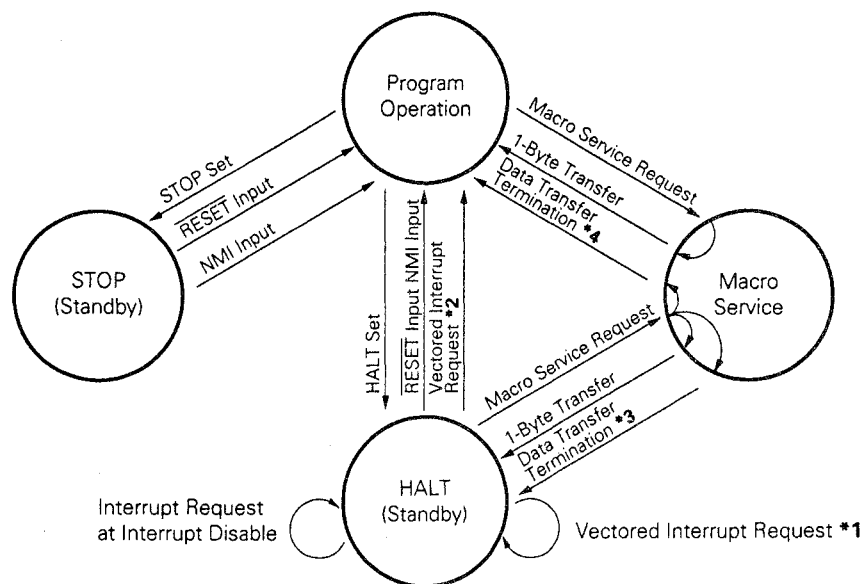

This is a function to reduce the power consumption of the chip. The following modes have been prepared.

- HALT mode: Stops the operation clock of the CPU. The average power consumption is reduced by the normal operation and the intermittent operation during normal operations.
- STOP mode: Stops the oscillator. This stops all operation in the chip and makes the minute power consumption status only with leakage current.

These modes are programmable.

Also, the macro service is started from the HALT mode.

Fig. 3-5 Standby Status Flow

- \* 1. In case a vectored interrupt request is a low priority level (status to disable interrupt of a low priority sequence under the HALT setting).
- 2. In case a vectored interrupt request is a high priority level or the status to enable interrupt of a low priority sequence under the HALT setting.
- 3. In case a macro service is a low priority level (status to disable interrupt of a low priority sequence under the HALT setting).
- 4. In case a macro service is a high priority level or the status to enable interrupt of a low priority sequence under the HALT setting.

### 3.4 RESET

When a low level is input to the  $\overline{\text{RESET}}$  pin, the internal hardware is initialized (reset state).

When the  $\overline{\text{RESET}}$  input becomes from a low level to a high level, the following data is set in the program counter (PC).

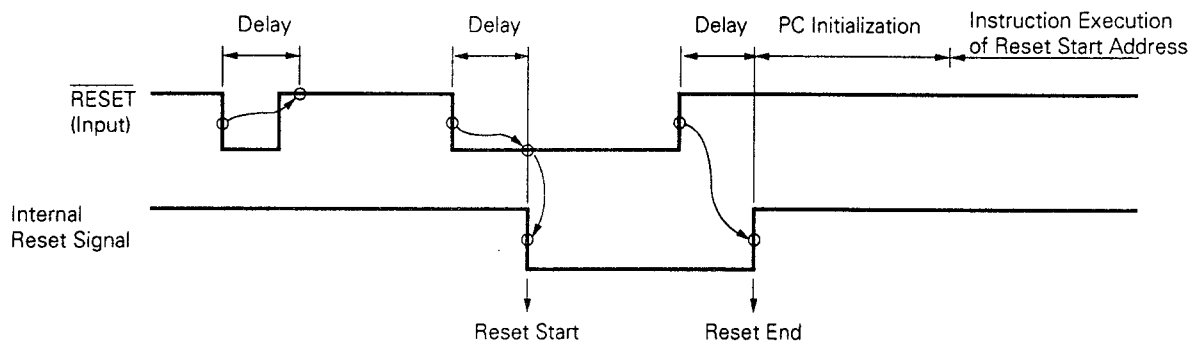

- Lower 8 bits of PC: Contents of 0000H address
- Upper 8 bits of PC: Contents of 0001H address

The contents of the PC set the destination address and the program starts to be executed from the address. Therefore, it can start from any address by reset start.

Please set the program for the contents of each register as required.

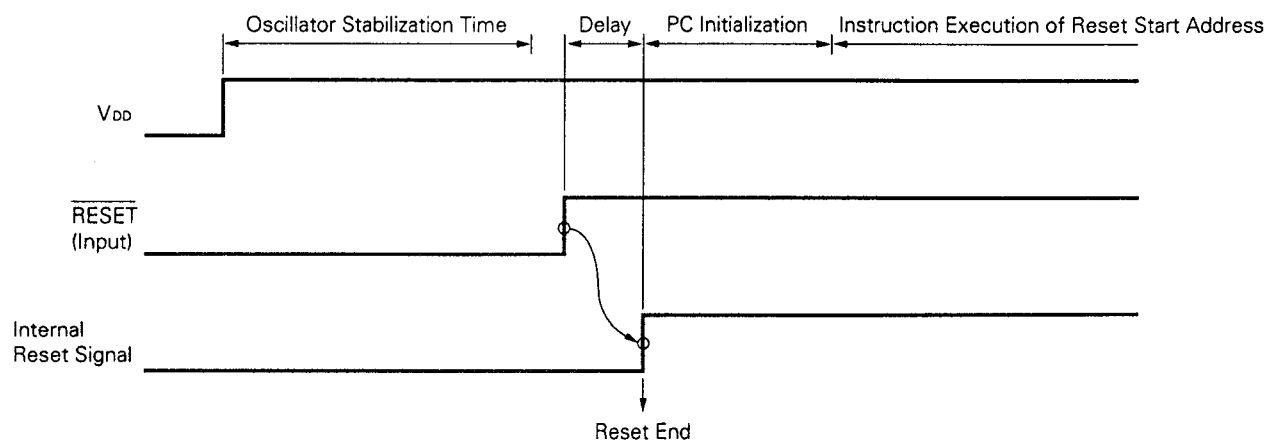

A noise eliminator has been incorporated in the  $\overline{\text{RESET}}$  input circuit to prevent any error from noise. This noise eliminator circuit is a sampling circuit based on analog delay.

Fig. 3-6 Reset Acknowledge

Set the  $\overline{\text{RESET}}$  signal active in the reset operation at power-on until oscillator stabilization time (approx. 40 ms) elapses.

Fig. 3-7 Reset Operation at Power-On

## ★ 4. INSTRUCTION SET

## (1) 8-Bit Instructions

MOV, XCH, ADD, ADDC, SUB, SUBC, AND, OR, XOR, CMP, MULU, DIVUW, INC, DEC, ROR, ROL, RORC, ROLC, SHR, SHL, ROR4, ROL4, DBNZ, PUSH, POP

Table 4-1 8-Bit Instructions Classified by Addressing

2nd operand 1st operand	# byte	A	r r'	saddr saddr'	sfr	mem	& mem	laddr16	&laddr16	PSW	n	None*2

A.bit	MOV1											SET1 CLR1 NOT1 BT BF BTCLR
X.bit	MOV1											SET1 CLR1 NOT1 BT BF BTCLR
saddr.bit	MOV1											SET1 CLR1 NOT1 BT BF BTCLR
sfr.bit	MOV1											SET1 CLR1 NOT1 BT BF BTCLR
PSW.bit	MOV1											SET1 CLR1 NOT1 BT BF BTCLR

\* There is no 2nd operand, or the 2nd operand is not an operand address.

**(4) Call/Branch Instructions**

CALL, CALLF, CALLT, BR, BC, BT, BF, BTCLR, DBNZ, BL, BNC, BNL, BZ, BE, BNZ, BNE

**Table 4-4 Call/Branch Instructions Classified by Addressing**

Operand of Instruction Address	\$addr16	laddr16	rp	laddr11	[addr5]
Basic Instructions	BR BC*	CALL BR	CALL BR	CALLF	CALLT
Compound Instructions	BT BF BTCLR DBNZ				

\* BL, BNC, BNL, BZ, BE, BNZ and BNE are same as BC.

**(5) Other Instructions**

ADJBA, ADJBS, BRK, RET, RETI, RETB, NOP, EI, DI, SEL

## 5. ELECTRICAL SPECIFICATIONS

Absolute Maximum Ratings ( $T_a = 25^\circ\text{C}$ )

Parameter	Symbol	Test Conditions	Rating	Unit
Supply voltage	$V_{DD}$		-0.5 to +7.0	V
	$AV_{REF}$		-0.5 to $V_{DD} + 0.5$	V
	$AV_{SS}$		-0.5 to +0.5	V
Input voltage	$V_{I1}$		-0.5 to $V_{DD} + 0.5$	V
	$V_{I2}$	*	-0.5 to $AV_{REF} + 0.5$	V
Output voltage	$V_O$		-0.5 to $V_{DD} + 0.5$	V
Output current low	$I_{OL}$	1 pin	15	mA
		All output pins total	100	mA
Output current high	$I_{OH}$	1 pin	-10	mA
		All output pins total	-50	mA
Operating temperature	$T_{opt}$		-40 to +85	$^\circ\text{C}$
Storage temperature	$T_{stg}$		-65 to +150	$^\circ\text{C}$

- \* Pins which are used as input pins of the A/D converter and which are selected by ANI0 to ANI2 bits of the ADM register when the A/D converter is not operated in P70/AN0 to P75/AN5, P66/ $\overline{\text{WAIT}}$ /AN6, P67/ $\overline{\text{REFRQ}}$ /AN7 pins. However,  $V_{I1}$  absolute maximum ratings should also be satisfied.

★ **Note** Product quality may suffer if the absolute maximum rating is exceeded for even a single parameter or even momentarily. That is, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions which ensure that the absolute maximum ratings are not exceeded.

## Operating Conditions

Clock Frequency	Operating Temperature ( $T_{opt}$ )	Supply Voltage ( $V_{DD}$ )
4 MHz $f_{xx}$ 12 MHz	-40 to +85 $^\circ\text{C}$	+5 V $\pm$ 10 %

Capacitance ( $T_a = 25^\circ\text{C}$ ,  $V_{DD} = V_{SS} = 0\text{ V}$ )

Parameter	Symbol	Test Conditions	MIN.	TYP.	MAX.	Unit
Input capacitance	$C_i$	f = 1 MHz unmeasured pins returned to 0 V.			20	pF
Output capacitance	$C_o$				20	pF
I/O capacitance	$C_{IO}$				20	pF

**Oscillator Characteristics** ( $T_a = -40$  to  $+85$  °C,  $V_{DD} = +5$  V  $\pm 10$  %,  $V_{SS} = 0$  V)

Resonator	Recommended circuit	Parameter	MIN.	MAX.	Unit
Ceramic resonator or crystal resonator		Oscillator frequency ( $f_{xx}$ )	4	12	MHz
External clock		X1 input frequency ( $f_x$ )	4	12	MHz
		X1 input rising/falling time ( $t_{xR}$ , $t_{xF}$ )	0	30	ns
		X1 input high/low level width ( $t_{wxH}$ , $t_{wxL}$ )	30	130	ns

**Note** When using the clock oscillator, wiring in the area enclosed with the dotted line should be carried out as follows to avoid an adverse effect from wiring capacitance. ★

- Wiring should be as short as possible.
- Wiring should not cross other signal lines.
- Wiring should not be placed close to a varying high current.
- The potential of the oscillator capacitor ground should be the same as  $V_{SS}$ . Do not ground it to a ground pattern in which a high current flows.
- Do not fetch a signal from the oscillator.

## 7. RECOMMENDED SOLDERING CONDITIONS

This product should be soldered and mounted under the conditions recommended in the table below.

For details of recommended soldering conditions, refer to the information document "Surface Mount Technology Manual" (IEI-1207).

For soldering methods and conditions other than those recommended below, contact our salesman.

**Table 7-1 Surface Mounting Type Soldering Conditions**

- (1)  $\mu$ PD78212GC-xxx-AB8 : 64-pin plastic QFP (14 × 14 mm)  
 $\mu$ PD78213GC-AB8 : 64-pin plastic QFP (14 × 14 mm)  
 $\mu$ PD78214GC-xxx-AB8 : 64-pin plastic QFP (14 × 14 mm)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 230°C, Duration: 30 sec. max. (at 210°C or above) Number of times: Once Time limit: 2 days* (thereafter 16 hours prebaking required at 125°C)	IR30-162-1
VPS	Package peak temperature: 215°C, Duration: 40 sec. max. (at 200°C or above) Number of times: Once Time limit: 2 days* (thereafter 16 hours prebaking required at 125°C)	VP15-162-1
Wave Soldering	Solder bath temperature: 260°C max., Duration: 10 sec. max. Number of times: Once Time limit: 2 days* (thereafter 16 hours prebaking required at 125°C) Preliminary heating temperature: 120°C max. (package surface temperature)	WS60-162-1
Pin part heating	Pin part temperature: 300°C max., Duration: 3 sec. max. (per lead side)	—

- (2)  $\mu$ PD78212GJ-xxx-5BJ : 74-pin plastic QFP (20 × 20 mm)  
 $\mu$ PD78213GJ-5BJ : 74-pin plastic QFP (20 × 20 mm)  
 $\mu$ PD78214GJ-xxx-5BJ : 74-pin plastic QFP (20 × 20 mm)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 230°C, Duration: 30 sec. max. (at 210°C or above) Number of times: Once	IR30-00-1
VPS	Package peak temperature: 215°C, Duration: 40 sec. max. (at 200°C or above) Number of times: Once	VP15-00-1
Pin part heating	Pin part temperature: 300°C max. Duration: 3 sec. max. (per lead side)	—

- (3)  $\mu$ PD78213L : 68-pin plastic QFJ (□950 mil)  
 $\mu$ PD78214L-xxx : 68-pin plastic QFJ (□950 mil)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
VPS	Package peak temperature: 215°C, Duration: 40 sec. max. (at 200°C or above) Number of times: Once Time limit: 2 days* (thereafter 16 hours prebaking required at 125°C)	VP15-162-1
Pin part heating	Pin part temperature: 300°C max. Duration: 3 sec. max. (per lead side)	—

\* For the storage period after dry-pack decapsulation, storage conditions are max. 25°C, 65% RH.

**Note** Use of more than one soldering method should be avoided (except in the case of pin part heating).

**Table 7-2 Insert Type Soldering Conditions**

**μPD78212CW-xxx, 78213CW, 78214CW-xxx : 64-pin plastic shrink DIP**

**μPD78213GQ-36, 78214GQ-xxx-36 : 64-pin plastic QUIP**

Recommended Condition Symbol	Soldering Conditions
Wave soldering (lead part only)	Solder bath temperature: 260°C max., Duration: 10 sec. max.
Pin part heating	Pin part temperature: 260°C max., Duration: 10 sec. max.

**Note** Ensure that the application of wave soldering is limited to the lead part and no solder touches the main unit directly.

**Notice**

A version of this product with improved recommended soldering conditions is available.  
For details (improvements such as infrared reflow peak temperature extension (235°C), number of times: twice, relaxation of time limit, etc.) contact NEC sales personnel.

## APPENDIX A. DEVELOPMENT TOOLS

The following development tools are available for system development using μPD78212, 78213 and 78214.

### Language Processing Software

RA78K/II*1, 2, 3	78K/II series common assembler package
CC78K/II*1, 2, 3	78K/II series common C compiler package
CC78K/II-L*1, 2, 3	78K/II series common C compiler library source file

### PROM Programming Tools

PG-1500	PROM programmer
PA-78P214CW PA-78P214GC PA-78P214GJ PA-78P214GQ PA-78P214L	Programmer adapters connected to PG-1500
PG-1500 controller*1, 2	PG-1500 control program

### Debugging Tools

IE-78240-R-A IE-78240-R*4 IE-78210-R*4	μPD78214 subseries common in-circuit emulators
IE-78200-R-BK	78K/II common break board
IE-78210-R-EM*4 IE-78240-R-EM IE-78200-R-EM*4	μPD78214 subseries evaluation emulation boards
EP-78210CW*4 EP-78240CW-R EP-78210GC*4 EP-78240GC-R EP-78210GJ*4 EP-78240GJ-R EP-78210GQ*4 EP-78240GQ-R EP-78210L*4 EP-78240LP-R	μPD78214 subseries common emulation probes
EV-9200G-74 EV-9200GC-64	Sockets mounted onto user system board for 74-pin plastic QFP and 64-pin plastic QFP
SD78K/II*1, 2	IE-78240-R-A screen debugger
DF78210*1, 2	μPD78214 subseries device file

**Fuzzy Inference Development Support System**

FE9000* <sup>1</sup> , FE9200* <sup>5</sup>	Fuzzy knowledge data creation tool
FT9080* <sup>1</sup> , FT9085* <sup>2</sup>	Translator
FI178K/II* <sup>1,2</sup>	Fuzzy inference module
FD78K/II* <sup>1,2</sup>	Fuzzy inference debugger

- \* 1. PC-9800 series (MS-DOS™) based.  
 2. IBM PC/AT™ (PC DOS™) based.  
 3. HP9000 series 300™ (HP-UX™) based, SPARCstation™ (Sun OS™) based and EWS-4800 series™ (EWS-UX/V™) based.  
 4. No longer manufactured and not available for purchase.  
 5. IBM PC/AT (PC DOS + Windows™) based.

**[MEMO]**

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

The devices listed in this document are not suitable for use in aerospace equipment, submarine cables, nuclear reactor control systems and life support systems. If customers intend to use NEC devices for above applications or they intend to use "Standard" quality grade NEC devices for applications not intended by NEC, please contact our sales people in advance.

Application examples recommended by NEC Corporation

Standard : Computer, Office equipment, Communication equipment, Test and Measurement equipment, Machine tools, Industrial robots, Audio and Visual equipment, Other consumer products, etc.

Special : Automotive and Transportation equipment, Traffic control systems, Antidisaster systems, Anticrime systems, etc.
